AsterNote Pro — Product User Manual

Edition 1.4 | Updated 12 August 2026

Document contents

Overview

AsterNote Pro is a fictional note-taking application for desktop and mobile devices. It supports notebooks, tags, full-text search, and encrypted cloud synchronization.

Creating a notebook

Select New Notebook from the sidebar, enter a name, and press Create. Notebook names may contain up to 60 characters. Names must not contain a slash character.

Search

The search bar supports exact phrases in quotation marks. For example, searching for "release checklist" returns notes containing that phrase. Filters can narrow results by notebook, tag, or modification date.

Offline mode

Users can read previously synchronized notes while offline. New edits are stored locally and uploaded after connectivity returns. If the same note is edited on two devices while offline, the app creates a conflict copy rather than silently overwriting either version.

Security

Cloud synchronization uses TLS 1.3 in transit and AES-256 encryption at rest. Account recovery codes are shown only once. Users should store them in a password manager and must never share them with support staff.

Exporting

A notebook can be exported as PDF, Markdown, or plain text. PDF export preserves headings and embedded images but does not include comments marked as internal.

Test note: This is fictional sample content. It contains deliberately specific facts, dates, numbers, and names so retrieval and citation behavior can be checked.
