BrightDesk IT — Troubleshooting Guide

Internal Support Reference | Revision 3 | September 2026

Document contents

Laptop will not connect to Wi-Fi

First confirm that airplane mode is disabled. Then reconnect to the approved network named BrightDesk-Staff. If other devices connect successfully, restart the laptop's Wi-Fi adapter and retry. Do not share the network password in a support ticket.

VPN connection fails

Check that the system clock is correct and that the BrightDesk VPN client is version 5.8 or newer. Restart the client once. If the error persists, record the error code and contact the Service Desk. Do not repeatedly submit login attempts after an account-lock warning.

Printer shows offline

Verify that the printer is powered on and connected to the office network. Remove stuck jobs from the print queue and print a test page. For printer PR-204, the approved driver is Universal Print Driver 7.2.

Password reset

Employees can reset their password through the internal identity portal. The reset link expires after 15 minutes. Service Desk staff will never ask users to disclose their current password or one-time authentication code.

Escalation targets

Priority 1 incidents affecting an entire office should be acknowledged within 15 minutes. Priority 2 incidents affecting a team should be acknowledged within 1 business hour. Priority 3 individual issues should be acknowledged within 8 business hours.

Test note: This is fictional sample content. It contains deliberately specific facts, dates, numbers, and names so retrieval and citation behavior can be checked.
